Hello Hiring Manager,

As a Business Analyst with a strong foundation in Computer Science and Engineering Management, I am energized by the challenge of translating complex operational data into clear, actionable strategies. My core philosophy is that great analysis is not just about surfacing numbers — it is about bridging the gap between technical complexity and business decision-making, enabling teams to act with precision and confidence.

My strength lies in structured thinking combined with a builder's mindset. I thrive in environments where I can architect clear requirements, eliminate process friction, and align cross-functional stakeholders around a single source of truth. From drafting rigorous PRDs and managing delivery cycles to designing AI-powered SOPs that reduce operational overhead, I bring both analytical depth and a commitment to measurable outcomes. My Lean Six Sigma Green Belt and CSPO certifications reflect a dedication to continuous improvement and disciplined process execution.

This approach was most visible during my time at the University of Texas at Arlington, where I architected a 50+ page AI-powered Standard Operating Procedure that reduced event planning time by 40% and improved stakeholder NPS by 35%. Through iterative feedback loops with 100+ vendors and 5,000+ attendees, I demonstrated that rigorous business analysis directly enables better experiences and stronger organizational outcomes.

I am seeking a role where analytical rigor, cross-functional partnership, and a passion for process improvement are valued as core drivers of business growth. I look forward to the possibility of contributing my skills to a team that is committed to making smarter, data-backed decisions.

Sincerely,

Abhishek Nagaraja
