Hello Hiring Manager,

As a Technical Product Manager with a foundation in Computer Science and Systems Architecture, I specialize in applying deep problem understanding and rigorous user research to bridge the gap between complex AI engineering execution and measurable product adoption.

My product philosophy is built on leveraging robust technical architectures to deliberately solve core user pain points and drive cross-functional alignment. My expertise spans executing highly iterative UX research methodologies, defining critical GTM metrics, and architecting scalable LLM infrastructures that directly mitigate operational friction and accelerate adoption across diverse stakeholder suites.

Recently, I architected **Thara**, a scalable LangGraph-based ecosystem of 11 autonomous AI agents, where I successfully orchestrated a 20% optimization in feature adoption rates utilizing A/B testing and predictive user heatmaps. Beyond purely technical builds, I previously orchestrated the full product lifecycle for '**MavMarket**', aggressively scaling operations to 5,000+ attendees and generating \$120,000 in revenue by designing AI-powered SOPs that objectively improved stakeholder Net Promoter Scores by 35%.

I am eager to apply this rigorous blend of systems engineering and iterative product leadership to help your highly technical cross-functional teams build the next generation of scalable infrastructure. I look forward to discussing how my strategic product experience can demonstrably accelerate your organization's innovation velocity.

Sincerely,

Abhishek Nagaraja
