Hello Hiring Manager,

As a Technical Product Manager, I am driven by the challenge of translating complex engineering capabilities into intuitive solutions tailored for global scale. My philosophy as a builder is rooted in technical empathy and adaptability—I believe that entering a new market or launching a new product requires not just a strong roadmap, but a culture of resilience and cross-functional trust. I am eager to bring this execution-first mindset to scale your operations in the region.

Beyond my foundation in Computer Science and Engineering Management, my core strength lies in navigating ambiguity to establish high-velocity delivery. I thrive on diving deep into technical systems, architecting solutions that align engineering teams with international business objectives. By maintaining high technical literacy, I foster seamless collaboration and shield developers from organizational friction, ensuring that strategy translates directly into measurable impact.

This cross-functional alignment defined my leadership of the 'MavMarket' initiative at the University of Texas at Dallas. By leaning into my technical background to architect an AI-powered SOP in Gemini, I didn't just optimize logistics; I built a resilient community framework. Resolving critical friction points through targeted user research reduced planning overhead by 40% and allowed us to successfully scale the platform to 200+ vendors and 5,000+ attendees.

I am looking for a forward-thinking organization that values deep ownership, technical rigor, and a culture of continuous iteration. I am eager to apply my product leadership to your global strategic initiatives and look forward to the possibility of contributing to your team's innovative success in the market.

Sincerely,

Abhishek Nagaraja
