Hello Hiring Manager,

As a Technical Product Manager with a strong engineering background and a Master's in Computer Science, I specialize in bridging the gap between complex engineering execution and business goals to deliver user-centric solutions.

I leverage deep technical expertise to drive product strategy and customer satisfaction. My experience spans architecting multi-agent AI infrastructures, executing technical market research, and designing AI-powered standard operating procedures that significantly reduce operational friction while maintaining high alignment with user needs.

I founded and managed the end-to-end product lifecycle for '**MavMarket**', scaling the platform to 200+ vendors and 5,000+ attendees while generating \$120,000 in revenue. By architecting an AI-powered SOP in Gemini and implementing an empathy-driven feedback system, I reduced event planning time by 40

I am eager to apply my technical acumen and product leadership to help your team build the next generation of high-impact products. I look forward to discussing how my background in engineering and strategic product management can contribute to your team's innovative culture.

Sincerely,

Abhishek Nagaraja
